# ScanGo

Product design

Scanners when placed back to back will create a pentagonal shape. The inclined position of the scanner provides a good accessibility and ergonomic interaction.

Scanners are using NFC which allows devices to communicate by being in the proximity.

Our goal

Orchestrate the crowd and help festival goers

Who are we?

We are five students from different nationalities and backgrounds who aim to improve your festival experience by helping you prioritize your activities.

Find your own path!

How does it work?

1. Place your phone next to the ScanGo scanners using the NFC module.

3. Enjoy your festival by being informed about the different stages, activities, concerts

2. You will be redirected to the ScanGo application, which gives you a map of the festival updated in real time.
